

CareIT: 3-Layer System Architecture Specification

This document outlines the Role-Based Access Control (RBAC) hierarchy for the CareIT MSP CRM system.

1. Summary of Roles

Layer	Role Name	Primary Responsibility
Layer 1	Support Associate	Customer intake and data entry.
Layer 2	Service Coordinator	Task assignment and workflow management.
Layer 3	Administrator	Full system control, reporting, and configuration.

2. Functional Capabilities

Layer 1: Support Associate

- **Access:** Customer/Lead data (Read/Write).
- **Functionality:** Create new leads, view status of existing leads.
- **Restrictions:** No access to technician management, deletion of records, or system settings.

Layer 2: Service Coordinator

- **Access:** Full Lead data, Technician schedules, and Ticket status.
- **Functionality:** Assign tickets to technicians, update ticket status, manage appointments.

- **Restrictions:** No access to user account creation/management or system configuration.

Layer 3: Administrator

- **Access:** Full system access (All tables/functions).
- **Functionality:** Create/delete user accounts, modify system permissions, generate analytics reports, full CRUD rights.

Developer Implementation Note: *Ensure backend middleware validates every request based on the user's role ID. Do not rely solely on UI-level hiding of elements for security.*
